HEALTHY LIFESTYLE GOAL & ASSESSMENT

PURPOSE AND EXAMPLES

Every day, health professionals encourage patients to live a healthier lifestyle in an effort to improve their medical condition and quality of life. In order to be successful practitioners, health providers must know where to begin, what to ask of patients, and how to encourage patients to change their behavior.

For most people, behavior change is not easy. Setting a challenging goal and achieving it is often harder than it looks - and requires time, effort and commitment.

Take a moment to review the purpose of this event. The goal is not to tell you how to think, feel or behave, but rather to help improve your understanding of how a healthy lifestyle affects individual health, **AND**, to let you experience the challenge of improving your own personal health.

Ultimately, your personal goal should be something you truly wish to achieve, and should be challenging yet attainable. Do you want to change a little, or a lot? Should you focus on exercise? Your nutrition? Will your goal really lead to improved physical health? How will you empirically and objectively measure your progress and accomplishments? Competitors in this event are **encouraged to see a licensed health provider before beginning this event** to obtain baseline data and discuss his/her goals for improving personal health. HOSA does not encourage any HOSA member getting involved with a fad diet, exercise program, or other program that is not under the direction of a licensed healthcare provider. These practices can be dangerous to a person's health and are not the intent of this event.

The following list of sample healthy lifestyle goals is provided to get you started. Be sure that the goal you write for yourself is specific and personalized to fit your individual needs.

Sample SMART goals:

- ★ I will increase my daily hydration to 64 oz. of water by the end of the spring semester. I will do this by bringing a 20 oz. water bottle with me everywhere and filling it up every morning, noon, and early evening. I will use a calendar to help me track my consumption.
- ★ By June 15th, I will be able to run one mile in under 8:00 minutes. I will do this by running after school with music that will help me pace my run five days a week, beginning with a 20-minute one-mile run, and reducing my time by at least 15 seconds every two weeks. I will track my progress in a fitness log.
- ★ I will reduce the number of stress headaches I get from one daily, to one bimonthly, by taking 10 minutes during each day to meditate. By May 15th, I will find and use soothing music or YouTube meditation videos to sit still in a corner of my room for 10 minutes each morning and focus on letting go of everything that is causing me pain. I will keep a pain diary to help me reach my goal.

A baseline health assessment is a critical starting point for any behavior change. It helps provide a current view of one's overall health status, including physical, social, and emotional wellness components. A baseline health assessment also helps provide guidance in the creation and follow through of the plan necessary to meet one's SMART goal. Competitors may research examples online, request one from their primary health provider, or create their own. For more information on baseline health assessments, visit:
